

Reliable P2P for example p.32

Sender

Upon send(m) from application

1. Create unique id
2. Buffer (m,id)
3. N_send(m,id) to receiver
4. Wait for ack
 1. If timeout goto 3

Receiver

Upon n_receive(m,id) from network

1. If id in hashtable
 1. Discard m
2. Else
 1. Add id to hashtable
 2. Deliver(m)
3. N_send(ack(id)) to Sender

❑ How to handle size of hashtable?
